OPERATION & MAINTENANCE

Fold-up Shower Seat requires only one hand operation to manually lower to horizontal position for use or raise for departure and arrival. Guide bracket with spring detent prevents seat from dropping and provides positive support in usage position as well as spring locked storage position. Gas charged struts assist opening by allowing slowly lowering seat to operating position from storage and assist closing by self-raising seat from approximately 25° to 85° and providing partial extra push required to achieve fully stored position.
